

DATA SHEET | FIREMIKS® 800-3-PP-F

PISTON PUMP TYPE FOR FIXED INSTALLATIONS

Approval: FM Class 5130, no 3060416

3% dosing system for firefighting - for fixed installations connected to a concentrate tank with gravity feed to dosing pump. Consists mainly of two volumetric parts; a Water motor and a Piston pump. Equipped with a Manual air relief valve. Flushing of dosing pump is done automatically when the concentrate inlet is closed with 3-way ball valve, (no 4 on Flow chart). Water motor available in three different materials, aluminium, nickel-aluminium bronze and stainless steel 316L.

Note: For illustration only. Refer to Dimensional Drawing for accurate representation of each model.

TECHNICAL DATA

PRODUCT NO with water motor material:		
- Aluminium 6082/7075:	FIREMIKS 800-3-PP-F-ALU-FM	
- Nickel-aluminium bronze JM7:	FIREMIKS 800-3-PP-F-BRZ-FM	
- Stainless steel 316L:	FIREMIKS 800-3-PP-F-SS-FM	
Dosing rate:	3 % (approved range 3,0-3,9 %)	
Max water flow rate:	800 lpm (210 US gpm)	
<i>Note! Maximum water flow rate is the approved maximum continuous flow rate entering the FIREMIKS. The unit has been tested for 40% overflow (=1120 lpm) for 3 minutes at start-up without any damage. During overflow/overspeed, the correct dosing might not be achieved.</i>		
Min water flow rate:	135 lpm (36 US gpm), 169 lpm (45 US gpm)	
<i>Minimum water flow rate varies depending on system pressure and viscosity properties of the concentrate. Minimum flow rate is here defined as the lowest flow rate where the dosing is correct, above 3,0%, at 4 bar inlet pressure. The first number is valid for the lowest approved viscosity, the second for the highest, see below. At flows below minimum flow, some dosing will still happen as long as the unit turns. Once min flow is reached, correct dosing at higher flows is no longer sensitive to fluctuations in pressure or viscosity for a given system.</i>		
Approved viscosity range:	1 centipoise – 1800 centipoise at 60 rpm or 3600 centipoise at 30 rpm, with Brookfield viscometer spindle #4	
Max inlet operating pressure:	16 bar (232 psi)	
Factory tested pressure:	24 bar (348 psi)	
Suction height:	0 meters (0 ft) Gravity feed	
<i>The pump has suction capability, but it is not recommended to be relied upon for safe operation. Suction requires priming of the pump and will lower dosing performance.</i>		
Operation temperature:	1°C to 55 °C (34°F to 131°F)	
Storage temperature, dry condition:	-30°C to 55°C (-22° to 131°F)	
Connections water motor:	<u>Standard:</u> G 2 1/2" male iso 228-1	<u>Optional:</u> ANSI/AWWA C 606-4 Cut groove DN 65 (73)
<i>Other connections available by using adaptors.</i>

MATERIALS	
Water motor housing and rotor: FIREMIKS 800-3-PP-F-ALU-FM FIREMIKS 800-3-PP-F-BRZ-FM FIREMIKS 800-3-PP-F-SS-FM	Aluminium EN AW 6082/7075, hard-anodized and PTFE-coated Nickel-Aluminium Bronze JM7 (C95500) Stainless Steel AISI 316L
Water motor components	AISI 316 (fasteners), PET (vanes), NBR (O-rings).
Dosing pump:	Aluminium, brass, ceramics, NBR, AISI 316 (fasteners)
Fittings:	High grade stainless steel
Valves and hoses:	High grade stainless steel + PTFE
DIMENSIONS AND DOSING PUMP CONNECTION	
Connection pump:	G 1" female iso 228-1
Overall dim. L x W x H mm:	699 x 452 x 495
WEIGHT	
Weight*: FIREMIKS 800-3-PP-F-ALU-FM: FIREMIKS 800-3-PP-F-BRZ-FM: FIREMIKS 800-3-PP-F-SS-FM:	48 kg 72 kg 71 kg
<i>*Average value, depending on optional equipment</i>	
PRESSURE LOSS TABLE (@8bar system pressure)	
135 lpm	0,6 bar
470 lpm	1,3 bar
800 lpm	2,3 bar
OPTIONAL	
Dosing return valve with pressure relief valve	Valve for returning the concentrate to the tank for easy and quick checking of admixture rate, without consuming concentrate and generating water/foam solution. Pressure relief valve included and set to open at 20 bar.
Reversed Flow direction (right to left)	Standard flow direction is from left to right seen from pump side
Adapters for water motor connections	Flanges of different kinds (ANSI, DIN), Storz couplings, etc
Y-strainer main flow	If the firefighting water contains foreign particles a strainer in the main water line before the FIREMIKS is a necessity

While the above numbers are correct to our best knowledge, for best practice we strongly recommend contacting us with your dosing case, stating the required flows and pressures, the data sheet of the concentrates to be used and any other useful information, so we can provide you with our most suitable dosing solution.
